Mr. Pickles Lanman's TLDR:

Mostly holds up

- Pershing Square published its Q3 2026 shareholder letter, signed by Bill Ackman and CIO Ryan Israel, and the link in the post works.
- The letter's main argument is that Microsoft, Meta, Amazon and Alphabet are spending on AI to grow, and that markets are wrongly punishing them for it.
- It sets the hyperscalers, which can pay for their buildout mostly from cash flow, against debt-reliant neoclouds, Oracle and SpaceX.
- Pershing owns Microsoft, Meta and Amazon, so the letter argues for its own positions.
- The post is a pointer with an endorsement and makes no argument of its own.

TRUTH CHECK The basic facts check out. The letter exists at the linked address and covers AI, hyperscalers, neoclouds and markets. Two small things are off: it came out on the afternoon of November 2, not 'today' (November 3), and it is co-signed by Ryan Israel. I could not pull text from the PDF itself, so its contents are checked through the official press release and news coverage.

Serif text is the author's, unchanged. Underlines and numbers point to Pickles' margin notes.

Bill Ackman of Pershing Square released his Q3 shareholder letter today.[1] It is essential reading on AI, hyperscalers, neoclouds and financial markets.[2] https://pershingsquareinc.com/wp-content/uploads/2026/11/Q3-26-PS-Inc-Letter-to-Shareholders.pdf[534]

1 · TRUTH CHECK: CONFIRMED

Real letter, a day earlier

The letter is real. Pershing Square Inc. (NYSE: PS) put it out with its Q3 results on Monday, November 2, after the market closed. November 3 was the day of the investor call. The letter is from CEO Bill Ackman and CIO Ryan Israel together, not from Ackman alone.

2 · PICKLES' TAKE

Read it as an argument

Pershing owns Microsoft, Meta and Amazon. The letter says the market undervalues exactly these companies. That doesn't make it wrong, but it is an argument for its own holdings, not neutral research. Its claim that revenue could beat consensus by 15% to 35% within three years is Pershing's own forecast.

3 · PICKLES' TAKE

Why it's worth reading

The letter gives a clear, testable view. Big Tech's yearly AI spending is up roughly fivefold, from about $140 billion in 2023 to $740 billion in 2026. Pershing argues it pays off either way. Either revenue beats forecasts, or spending gets cut and free cash flow rises. That is a sharp counterpoint to the market's capex worries.

4 · PICKLES' TAKE

Jargon needs a gloss

For readers outside the industry: hyperscalers are the giant cloud owners (Microsoft, Amazon, Google, Meta). Neoclouds are newer firms that rent out AI computing and lean on debt. According to coverage, the letter's point is that hyperscalers can pay for the buildout from cash. Neoclouds face rising borrowing costs and falling share prices.

5 · TRUTH CHECK: CONFIRMED

The link works

The address opens a real 1.4MB PDF on Pershing Square's own website, which is where the press release says the letter is posted. I could not get readable text out of the file. So the summaries in these notes come from the press release and news coverage, not from the PDF itself.
